Art Unit: 2631

DETAILED ACTION

Specification

The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use. Please include those sections/section headings that are applicable to the pending application.

Arrangement of the Specification

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.
- (d) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC (See 37 CFR 1.52(e)(5) and MPEP 608.05. Computer program listings (37 CFR 1.96(c)), "Sequence Listings" (37 CFR 1.821(c)), and tables having more than 50 pages of text are permitted to be submitted on compact discs.) or

REFERENCE TO A "MICROFICHE APPENDIX" (See MPEP § 608.05(a). "Microfiche Appendices" were accepted by the Office until March 1, 2001.)

- (e) BACKGROUND OF THE INVENTION.
 - (1) Field of the Invention.
 - (2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (f) BRIEF SUMMARY OF THE INVENTION.
- (g) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).
- (h) DETAILED DESCRIPTION OF THE INVENTION.
- (i) CLAIM OR CLAIMS (commencing on a separate sheet).
- (j) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).
- (k) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).

The present specification is a copy of the specification filed in application number 08/965,136, which is replete with grammatical and idiomatic errors. Appropriate correction is required. Applicant is also required to amend the first line of the specification to reflect the claiming of the benefit of parent application serial number 08/965,136.

Art Unit: 2631

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-8 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-8 of U.S. Patent No. 5903612. Although the conflicting claims are not identical, they are not patentably distinct from each other because.

Referring to claim 1, patent number 5903612 claims, in claim 1, the generation of a signal in the receiver whenever data is needed for an available time frame, said signal not having constant frequency; the generation of trigger signals in the receiver and sending the trigger signals to the transmitter to indicate the transmitter is allowed to send data; and the transmitter sends data upon receipt of the trigger signal without the need for further synchronization with a reference signal.

Claim 1 of the pending application claims all of the above-mentioned subject matter, with the exception of the details regarding the time frame for generation of the signal in the receiver.

It would have been obvious to one of ordinary skill in the art at the time of the invention to

Art Unit: 2631

modify the claim of patent number 5903612 by omitting these details thus having a more generic system.

Claims 4 and 6 of Patent number 5903612 once again include additional details not present in claims 4 and 6, respectively, of the pending application. It would have been obvious to modify these claims for the same reasons stated in the explanation of claim 1.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

4. Claims 1,2, and 4-7 are rejected under 35 U.S.C. 102(e) as being anticipated by Cioffi.

Regarding claims 1, 4, and 6, Cioffi discloses a discrete multi-tone data transmission system using an overhead bus for synchronizing multiple remote units comprising the steps of generating trigger signals (figure 7, step 10; column 10, lines 45-48); sending trigger signals

Art Unit: 2631

(figure 7, step 320; column 10, lines 49-51); and upon receipt of said trigger signal by the transmitter sending data from the transmitter to the receiver (see figure 7, step 340; column 10, lines 56-57).

Regarding claims 2 and 7, Cioffi further discloses the data is asynchronous data (figure 3, element 40; column 5, lines 37-38).

Regarding claim 5, Cioffi further discloses the receiver is included in ADSL (column 2, lines 59-62).

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 7. Claims 3 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cioffi in view of Gregg. Cioffi discloses all of the subject matter as described above. Cioffi does not show the transmission of idle data in the event that no data is available in the transmitter. Gregg

Page 6

teaches the generation and transmission of idle characters in a synchronizing circuit in the event no data is being transmitted (column 1, lines 25-27; column 2, lines 40-47). In order to keep the frame synchronization process functioning properly, data must be transmitted whenever it is needed. Generating and transmitting idle data ensures data is always available. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to implement the idle character generator taught by Gregg with the teachings of Cioffi so that the frame synchronization process is not disturbed.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Galula et al discloses a synchronization system, which includes the generation and transmission of a trigger signal by a receiver, and the receipt of said trigger signal by a transmitter causing said transmitter to submit data. Maeda et al discloses a data transmission unit for asynchronous data as well as a synchronization system whereby a transmitter sends data upon receipt of a signal from the receiver.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Demetria A. Williams whose telephone number is (703) 305-4078. The examiner can normally be reached on Monday - Friday, 8:00 - 4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chi Pham can be reached on (703) 305-4378. The fax phone numbers for the Application/Control Number: 09/280,435 Page 7
